

Property: USES

Headline

Usage relation between entities

Description

1. When speaking of software reuse, it means that a software component uses another. Any technology may reuse another, such as ANTLR reuses Stringtemplate. Contributions use technologies as they are supposed to demonstrate their usage.
2. Any technology or contribution may use a language, which means that there is some essential functionality written in this language in the implementation.
3. Any technology or contribution may use certain concepts, such as design pattern for structuring and maintainability of the original source code.
